## The erection of steel frame – May 2011

## AD farm erection continues – June 2011

## Main Building Progress - July 2011

## AD farm and main building progress – Aug2011

## Main building progress – Sep 2011

October 2011

The first trommel to arrive has been installed inside the main building.

The trommel will sort and separate waste in the Mechanical Biological Treatment MBT facility

November 2011

The roof and cladding to the process building is 90% complete

Trommels x 2 now installed

December 2011

Side view of the MBT construction

The mixers are now installed in the Wet Pre-Treatment area

January 2012

The construction of the MBT is progressing well. The mechanical separation equipment is currently being installed

Progress on the Visitors Centre
